

Pretto.com.au
crystals@pretto.com.au

Welcome to **Pretto Crystals** catalogue. We specialise in exporting South America's precious stones to the world.

Our clients are passionate wholesalers and distributors located across the globe. Our prices are in USD and we work closely with global cargo companies who can guide our customers and give them a quotation of the whole logistics process.

The quotation can include insurance, collection, international freight, clearances in the origin and at the destination, import Duty, delivery, storage, and any other costs the logistics process may incur.

Our stock is limited and has been selling fast. Our catalogue shows the precious stones we have in stock, EXW prices, available quantity and the description of each item.

Let us know which stone you like and/or you are looking for (if you cannot see it in the catalogue still ask) and we will get right back to you.

Please contact us at crystals@pretto.com.au for additional info & orders.

the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 13.5 million, and the number of people aged 75 and over has increased from 4.5 million to 6.5 million (Office for National Statistics 2000).

There is a growing awareness of the need to address the needs of older people, and the UK Government has set out a strategy for the 21st century (Department of Health 1999). The strategy is based on the concept of 'active ageing', which is defined as 'the process of optimising opportunities for health, participation in society, and security in old age' (Department of Health 1999, p. 1).

The strategy is based on three pillars: health, participation and security. The Department of Health has set out a number of objectives for each pillar, and has identified a number of key areas for action. The key areas for action are: health, participation, security, and the environment (Department of Health 1999).

The Department of Health has set out a number of objectives for each pillar, and has identified a number of key areas for action. the 1990s, the number of people in the UK who are employed in the public sector has increased from 10.5 million to 12.5 million, and the number of people in the public sector who are employed in health care has increased from 1.5 million to 2.5 million (Department of Health 2000).

There are a number of reasons why the public sector has become an important part of the UK economy. One of the main reasons is that the public sector provides a wide range of services that are essential for the well-being of the population. These services include health care, education, and social care. The public sector also provides a number of other services that are important for the economy, such as transport and housing.

Another reason why the public sector has become an important part of the UK economy is that it provides a source of employment for a large number of people. In 2000, the public sector employed 12.5 million people, which is 25% of the total UK workforce. This is a significant proportion of the workforce, and it shows that the public sector is an important source of employment for many people in the UK.

There are a number of challenges that the public sector faces in the future. One of the main challenges is that the population is ageing, and this is leading to an increase in the number of people who need health care and social care. This is putting a strain on the public sector, and it is likely that the public sector will need to provide more services in the future.

Another challenge that the public sector faces is that it is facing increasing competition from the private sector. The private sector is providing a number of services that are traditionally provided by the public sector, and this is leading to a loss of revenue for the public sector. This is a significant challenge for the public sector, and it is likely that the public sector will need to find ways to compete with the private sector in the future.

There are a number of ways that the public sector can address these challenges. One way is to increase efficiency and reduce costs. This can be done by streamlining services and reducing waste. Another way is to increase revenue. This can be done by increasing the number of people who are employed in the public sector, and by increasing the number of services that are provided.

It is clear that the public sector is an important part of the UK economy, and it is likely that it will continue to be an important part of the UK economy in the future. However, the public sector is facing a number of challenges, and it is likely that it will need to find ways to address these challenges in the future.
